

```

public class LowerCase {

    public static void main (String[] args) {

        String original = args[0];

        String lower = "";

        for(int i=0; i < original.length(); i++){

            if(( 64 < original.charAt(i) ) && (original.charAt(i) < 91 ))

                {

                    lower = lower + (char) (original.charAt(i) + 32);

                }

            else{

                lower = lower + original.charAt(i);

            }

        }

        System.out.println(lower);

    }

}

```
