```java
public class UniqueChars {

        public static void main (String[] args) {

    // definig String answer and the strings we input so it has no unique chars

                String original = args[0];

                String answer = "";

    // goes for each and every one of the chars of the string original

    // and adding only unique chars and space to the answer

                for(int i=0; i <original.length() ; i++){

                        if( (answer.indexOf(original.charAt(i)) == -1) || ((original.charAt(i)) == ' ' )){

                                answer = answer + original.charAt(i);

                        }

                }

    // printing the String we formed

                System.out.println(answer);

        }}
```
